# Stormwater Pollution Prevention Guide FOR HOMEOWNERS

The U.S. Environmental Protection Agency estimates that contaminants in stormwater runoff cause over half of the pollution in our nation's waterways.

Stormwater pollution begins when rain or snowmelt washes over pavement and other impervious surfaces, picks up contaminants, and flows down stormdrains to the waterways we rely on for drinking and recreation.

Common pollutants include antifreeze, detergents, fertilizers, gasoline, household chemicals, motor oil, paints, pesticides, pet waste, road salt, solvents, and yard waste

# HELP KEEP OUR WATERWAYS CLEAN!

Please check the back of this page for tips on preventing stormwater pollution.

It's easier than you think!

Stormwater pollution is the toxic mix of bacteria, chemicals, metals, nutrients and other contaminants that washes over pavement and other impervious surfaces and flows down stormdrains to the waterways we rely on for drinking and recreation.

Let's work together to keep our waterways clean.

### **PICK UP AFTER YOUR DOG**

Dog waste carries high levels of harmful **E. coli bacteria** and other pathogens, and is a major contributor to local water pollution.

 Pick up the poop! Always carry a plastic bag when you walk your dog and dispose of pet waste in a trash can.

### **LAWN & GARDEN**

- Choose organic lawn chemicals whenever possible.
- Use lawn chemicals sparingly and never use more than the directions call for.
- Sweep up dry chemical spills and dispose in trash
- Don't pile yard waste near streams, wetlands, or storm drains.
- Start a compost pile.
- Don't allow irrigation to spray onto pavement.
   Water that ends up on the pavement contributes to pulluted runoff and is wasted.
- Make sure that your landscaper / irrigation contractor follows rules for preventing stormwater runoff
- Redirect downspouts toward grassy areas, trees and shrubs, so that runoff from your roof can soak into the ground away from your home.
- Set a rain barrel under your downspout to capture water for another use.
- Plant rain gardens to help filter and soak up water before it runs onto the street.

# **HOMES / BUSINESSES**

- Use the **least toxic products available** for cleaning, etc.
- Avoid liquid chemical spills such as oil, gasoline, antifreeze, paint, etc. on paved areas.
- If a liquid chemical spill occurs, clean with rags or absorbent material such as sand or kitty litter.
   Sweet up absobents and dispose of in the trash.
- Never use a hose to wash down the driveway or sidewalk. This washes pollutants into storm drains and is a waste of water.
- Never pour washwater or chemicals down storm drains.

- Store chemicals in leak proof containers inside a building or shed, or under cover, away from rainwater.
- Avoid oversalting walkways and driveways in the winter, and use non-toxic products whenever possible.
- Sweep up all construction areas on a regular basis and dispose of debris in the trach.

#### **WASHING CARS & BOATS**

- Park your vehicle in a spot where the soap will run off onto grass, rather than into the street and down the storm drain. If practical, park your vehicle on your lawn when washing it.
- Use organic or mild soaps and detergents.
- Never clean or pressure wash the undercarriage of a car at home. The oil, grease, and other pollutants from this activity can contaminate shallow groundwater.
- Always use a hose nozzle with a trigger, and shut it off when you're not using it to conserve water.

## **AUTOMOTIVE REPAIR**

- Store automotive parts, such as batteries, engines, transmissions, and parts that may have oily or greasy residue on them, under cover and off the ground to minimize rainwater contact. Rainwater can wash pollutants off these parts and into the storm drain.
- Collect all used oil, antifreeze, and other vehicle fluids in containers with tight fittings lids and recycle at a local service station.

# **SWIMMING POOLS AND HOT TUBS**

- Never discharge pool water directly into a storm drain.
- Decholorinate pool, hot tub, or spa water with neutralizing chemicals, if water is to be discharged into the ground.
